SUMMARY

- Full Stack Developer with 2 years of experience building a B2B procurement platform using React, Spring Boot, Python, and PostgreSQL, with hands-on exposure to AI/LLM integration and CI/CD pipelines.
- Currently expanding into DevOps, with exposure to Docker, Kubernetes, and CI/CD workflows.
- Exploring AI/ML concepts further, alongside hands-on experience building LLM-based workflows.
- Migrated EventStoreDB architecture to Kafka with DLQ and retry mechanisms to reduce message failures.
- Built a document extraction workflow using LangGraph, FastAPI, and GPT-4o Vision for automated purchase order processing.

SKILLS & TOOLS

Languages	Python, Java, JavaScript, TypeScript
Frontend	ReactJS, Material-UI
Backend	Spring Boot, Hibernate, Spring Data JPA, Kafka, FastAPI
Databases & Cache	PostgreSQL, Redis, Firebase, EventStoreDB
Architecture	Microservices, Event-Driven Architecture, CQRS, Event Sourcing
Security	Keycloak, JWT, RBAC
AI & Integrations	GPT-4o, LangGraph, Spring AI, OpenAI APIs, Prompt Engineering
Tools	Git, GitHub, Docker, Postman, OpenAPI, IntelliJ

WORK EXPERIENCE

Full Stack Developer Sep 2024 - Present
US-Based Product Startup (*ProPay.ai - AI-Powered B2B Procurement & Tail Spend Management Platform*)

AI / LLM Integration

- Built a Python microservice (FastAPI + LangGraph) that processes purchase orders (PDFs, images) through a 5-node workflow using GPT-4o vision — extracting supplier/buyer entities, line items with pricing, and item categories across 3 sequential stages.
- Implemented human-in-the-loop review nodes with retry limits, back-stage correction routing, and partial field re-extraction.
- Used Redis as LangGraph checkpoint store (TTL-scoped) across replicas — preventing session loss during load balanced requests.
- Stored final confirmed results in PostgreSQL for structured querying and user suggestions.

Event-Driven Architecture (Kafka · CQRS)

- Migrated EventStoreDB architecture to Kafka with Spring Cloud Stream and DLQ — eliminating unrecoverable message failures through retry mechanisms and dead letter queues.

Backend (Spring Boot · PostgreSQL)

- Built 10+ REST APIs across Orders, Quotes, and Masterdata microservices using Spring Boot and OpenAPI Generator.
- Integrated EU VAT compliance and Indian legal entity verification (DeepVue Tech) APIs into Masterdata microservice.
- Integrated QuickBooks with webhook support for real-time inbound payment event handling and outbound data sync.
- Implemented audit logging with full event history and field-level diff tracking across write database.

Frontend (React)

- Implemented Keycloak OAuth2 auth flow in ReactJS with multi-tenant, multi-role support and role-based conditional UI rendering.
- Built role-based UI screens with dynamic theming (CSS variables), lazy loading, and i18n support.
- Developed responsive MUI components with Formik form validations and REST API integrations.

EDUCATION

B.Tech in Computer Science and Engineering - Sree Vidyanikethan Engineering College	2020 - 2024
9.33 CGPA	

CERTIFICATIONS

IBM DevOps and Software Engineering — Professional Certificate, IBM (via Coursera)	Sep 2026
